

PI Math Club
is pleased to present a talk by

Dr. David Maloney
IPFW Professor of Physics

The title of his talk is

“Deciding how to attack a problem: The role of task format, heuristics and conceptual understanding”

Students are confronted with numerous word problems in their science and mathematics courses and are often unsure about how to tackle them. This session will be an exploration and investigation of the role of the three factors identified in determining how someone reaches a decision about what needs to be done to solve such problems. Fair warning: the session will be interactive and audience participation will be expected.

Wednesday, March 2

at noon
in KT 216

Free pizza and pop following the talk!

Open to all interested students.
