

PI Math Club
is pleased to present a talk by

Dr. Dan Coroian
IPFW Department of Mathematical Sciences

The title of his talk is

“A Few Hard-to-Believe Facts in Everyday Math”

Mathematics still has a few surprises that are designed to test and push your mental limits. Several relatively simple but controversial math problems and paradoxes, such as The Game Show Problem, The Birthday Paradox, Benford’s Law, and others, will be presented. If you’re looking for a mathematical way to impress your friends and beguile your enemies, here’s a good place to start.
