

# Data Science and Machine Learning Seminar Series

Thursday 15th October 2020 3:00pm IDEASpace

Virtual Presentation: <https://purdue.webex.com/meet/aselvite>

## Prof. Jeffrey Pomerantz

School of Library and Information Science  
Simmons University

### Introduction to Metadata for Deep Learning

A common, but ultimately unhelpful, definition of metadata is that it is "data about data." A better definition is that metadata is a statement about a resource. That resource may be anything: natural or artificial, physical or digital, unitary or compound. In this talk, I will introduce metadata from the perspective of the field of Library and Information Science. I will also discuss what metadata may be applied to, or extracted from deep learning.
