

# Derivatives of Exponential Functions

Each of these limits is  $f'$  for some function  $f$  of  $h$  and some value  $a$ .

Report  $f$ . Report  $a$ . Report the value of  $f'(a)$ .

Use the TANGENT feature of a grapher. If  $f'(a)$  is undefined, write DNE.

$$\lim_{h \rightarrow 0} \frac{e^h - 1}{h} = \underline{\hspace{2cm}}. \quad f(h) = \underline{\hspace{2cm}}; \quad a = \underline{\hspace{2cm}}$$

$$\lim_{h \rightarrow 0} \frac{e^{kh} - 1}{h} = \underline{\hspace{2cm}}. \quad f(h) = \underline{\hspace{2cm}}; \quad a = \underline{\hspace{2cm}}$$

Use the limit definition to show the derivative of  $y = e^x$  is itself.

$$f(x) = \boxed{\hspace{2cm}} \quad f(x+h) = \boxed{\hspace{2cm}}$$

$$\frac{d}{dx} e^x = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{(x+h) - x} = \lim_{h \rightarrow 0} \boxed{\hspace{4cm}}$$

$$= \lim_{h \rightarrow 0} \frac{1}{h} \cdot \left( e^x \cdot \boxed{\hspace{2cm}} - e^x \right) \text{ by the law of exponents.}$$

$$= \lim_{h \rightarrow 0} \frac{1}{h} \cdot \left( e^x \left( \boxed{\hspace{2cm}} \right) \right) \text{ by factoring out } e^x.$$

$$= \lim_{h \rightarrow 0} e^x \cdot \lim_{h \rightarrow 0} \frac{\boxed{\hspace{2cm}}}{h} \text{ by writing as a product of limits.}$$

$$= \boxed{\hspace{2cm}} \cdot \boxed{\hspace{2cm}} \quad \text{Why? } \underline{\hspace{10cm}}$$

1. Use the limit definition to show the derivative of  $y = e^{kx}$  is proportional to its own derivative.  
What is the constant of proportionality?

$$f(x) = \boxed{\phantom{000}} \quad f(x+h) = \boxed{\phantom{000}}$$

$$\frac{d}{dx} e^{kx} = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{(x+h) - x} = \lim_{h \rightarrow 0} \boxed{\phantom{000}}$$

$$= \lim_{h \rightarrow 0} \frac{1}{h} \cdot \left( e^{kx + \boxed{\phantom{00}}} - e^{kx} \right) \quad \text{Distribute the } k(x+h).$$

$$= \lim_{h \rightarrow 0} \frac{1}{h} \cdot \left( e^{kx} \cdot \boxed{\phantom{00}} - e^{kx} \right) \quad \text{by the law of exponents.}$$

$$= \lim_{h \rightarrow 0} \frac{1}{h} \cdot \left( e^{kx} \cdot \left( \boxed{\phantom{000}} \right) \right) \quad \text{by factoring out } e^{kx}.$$

$$= \lim_{h \rightarrow 0} e^{kx} \cdot \lim_{h \rightarrow 0} \frac{\boxed{\phantom{000}}}{h} \quad \text{by writing as a product of limits.}$$

$$= \boxed{\phantom{000}} \cdot \boxed{\phantom{000}} \quad \text{Why? } \underline{\hspace{10cm}}$$

The derivative of  $y = e^{kx}$  is proportional to its own derivative with constant of proportionality equal to \_\_\_\_\_, i.e.

if  $y = e^{kx}$ ,  $y' = \boxed{\phantom{000}}$

2. Use the previous result to show the derivative of  $y = b^x$  is proportional to its own derivative. Hint: Set  $b = e^k$ .  
What is the constant of proportionality?

The derivative of  $y = b^x$  is proportional to its own derivative with a constant of proportionality of \_\_\_\_\_, i.e.

if  $y = b^x$ ,  $y' = \boxed{\phantom{000}}$
