

Complete this worksheet as a group to transition to testing your Project 3 design.

Submit your completed worksheets and memo electronically as requested by your instructor.

1. Collect test data using your smartphone sensor and record each scenario to a CSV file. Use your group's test plan to identify the data that needs to be collected.

Describe the data collected below, including the test environment and what you're hoping to capture:

2. Use your application and collected data to execute your test plan. Analyze the results to determine the effectiveness of your design.

Write a memo describing the test execution and results, including any initial conclusions you have. The memo will be evaluated against the following review criteria:

- The tests check the performance of the application in meeting the design requirements
 - The results indicate which requirements were met and which were not met
 - The results are communicated in a clear and concise manner
 - The conclusions are reasonable given the design intention and the test results
